

TORQUE TRANSMISSION DEVICE

5

ABSTRACT OF THE DISCLOSURE

10 A plate 13e, the outer diameter side of which is  
fixed to be integral with a plate section 13c, and which  
is provided with an engagement part 13g to be engaged  
with a shoulder 13f formed on the inner diameter side of  
a boss section 13a, is integral with a center hub 13.  
Thereby, even if a bridge section 13d is broken and the  
plate section 13c moves in the detachment direction of  
15 the center hub 13, the engagement part 13g of the plate  
13e is engaged with the shoulder 13f of the boss section  
13a, whereby the plate section 13c and the boss section  
13a are engaged and coupled with each other while  
interrupting the torque transmission. Accordingly, even  
20 if the bridge section 13d is broken, the boss section 13a  
as well as the plate section 13c side are prevented from  
being detached from a pulley 10.
